Bibliography on the Economics of Fruit and Vegetable Production and Marketing, 1965-76

Compiled by Joan Pearrow

PREFACE

This bibliography lists research reports published between January 1, 1965, and June 30, 1976, on the economics of the production and marketing of fruits and vegetables. It includes references on costs, prices, grades, competition, market structure, projections, shipments, processing, and miscellaneous activities. The references are listed alphabetically by author, under 11 major headings. An author index with page number references comprises the last section of the compilation.

The Economics, Statistics, and Cooperatives Service (ESCS), U.S. Department of Agriculture, has prepared this bibliography as a contribution to the Northcentral Regional Project, NC-117, Structure and Performance in Agriculture. In this phase of the regional project, the Economic Research Service (ERS), now part of ESCS, cooperated with several major land-grant institutions in selected research projects on economic aspects of the production and marketing of fruits and vegetables. This bibliography will alert researchers to the information available in these areas.

Some of the listed references are out of print. These can be found in the National Agricultural Library, the libraries of the land-grant institutions, or perhaps, the files of the authors. Publications which are currently in print may often be obtained from the issuing institution on a fee-basis only. Entry numbers 424, 543, 544, 545, 672, and 1020 published prior to 1965 were included in this bibliography because they were submitted by the publishing institutions and the subject matter is highly pertinent to the bibliography. Information on these entries was not available for publication previously. The U.S. Department of Agriculture (USDA) does not have copies of research publications issued by other institutions; however, USDA's research publications are generally available free of charge.

The bibliography was compiled under the general supervision of Jules V. Powell, Agricultural Economist in the Fruits, Vegetables, Sweeteners, and Tobacco Program Area of the Commodity Economics Division, ESCS.
